

MODEL 760 SERIES VALU-METER 50 LB. VOLUMETRIC FEED DROP

Above, end control unit showing the doors closed.
At right, doors opened.

Pax can supply your entire feeding system, including bulk feed storage bins and flexible auger systems.

Ideal for relieving stress in gestating sows in pens

Posi-lock winch lets you quietly drop feed when animals are calm — eliminating the stress of hand feeding. Provides a wide, double row spread pattern to ease feeding competition among sows. Each feeding session begins by “dropping” feed — then, while animals are eating, the system can be filled for the next session.

Quick and easy adjustment from 0 to 52 pounds in approximate 2 lb. increments. Easy installation on new or existing lines.

Quality designed with all-poly body and heavy galvanized steel for long life and low maintenance.

Pax also manufactures a wide variety of bulk feed bins, flexible auger boots and other equipment to let you build a complete system to your exact requirements.

Specifications Series 760 Valu-Meter

- Capacity0-52 pounds
- Length 36"
- Width at bottom 18"
- Height including auger..... 18"
- Appx. spread pattern at 7' auger height
 - Length each row 48"
 - Distance between rows 36" to 48"
- Shipping weight 30 lbs.

PEOPLE, PRODUCTS, SOLUTIONS.

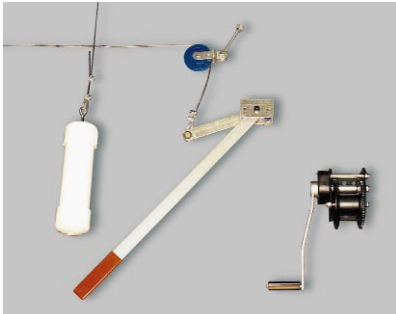

MODEL 770 SERIES VALU-METER 10 LB. VOLUMETRIC FEED DROP

10 lb. drop

10 lb. end control unit.

Choice of manual trip lever or winch for releasing feed.

Drop tube is 27" long with 3-1/16" ID inlet for easy attachment to the feed drop. Outlet end of drop tube has 2", 2-1/16", and 2-3/8" ID steps for easy attachment to your stall.

Three ports are provided for mounting the Pax proximity switch to meet your needs. A handy cleanout door is also provided.

For controlled feed rationing in breeding and gestation.

Individual calibration lets you set each drop for the amount of feed ration required. The translucent body allows visual inspection of the feed level – and calibration marks let you see at a glance the amount of feed each drop is set to deliver. Calibration is easy. A simple adjustment with a durable slide handle allows you to ration approximately 2 to 10 pounds per drop.

A proximity switch stops the auger system after all drops on the system are filled to your preset volume – and a manual winch or trip lever simultaneously releases feed from all drops on the system.

Each feeding session begins by “dropping” feed. Then while animals are eating, the system automatically refills for the next feeding session – reducing animal stress caused by hand feeding.

Quality design and all plastic construction provides long life, reliability and top performance.

Maintenance costs are low, and installation is easy – including installation on existing auger lines.

Specifications Series 770 Valu-Meter

Capacity.....	0-10 pounds
Height.....	22-1/2"
Outlet OD.....	3"
Shipping weight.....	3 lbs. each
Fits 2.25" (55 mm) as well as 3" (75 mm) auger lines.
