

# Increase Production With Our New & Improved Watering System.

## More Water, Less Mess!

We have something to crow about and so will you with this improved Breeder Watering System from VAL-CO. The New Breeder Drinker will give your birds as much water as they need without wasting a drop. This nipple can *increase production up to 5 eggs per bird per year*. Easier flushing intakes and white watering lines make this the coolest system around. Your birds will get cooler fresh water and more of it.

### NEW & IMPROVED Breeder Watering System:

- **NEW** Breeder Drinker for higher water flow and less waste.
- **IMPROVED** hanging kit for more stability.
- **NEW** Universal Saddle for optional use of cup.
- **IMPROVED** Extra High Flow VR205 Regulator for more water flow.
- **NEW** Regulator Intake for even easier line flushing.

### Better Than the Rest!

- **Bigger, heavier conduit** for more stability than others
- **White water pipe** for cooler water
- **Conduit and water line clamp** together as one solid unit
- **Conduit cannot turn** in clamp
- **Water pipe cannot turn** on conduit

**VALCO**

  - Nests
- Cage Equipment
  - Lighting
- Brooders & Heaters
- Evaporative Cooling
- Fans & Other Ventilation
- Whole House Controllers™
  - Cremators

**The NEW Breeder Drinker**

This is a brand new drinker based on years of experience in the poultry field. The flow pin is a stainless steel, tapered pin that will allow variable flow of water and, at the same time, reduce accidental side triggering. This means *less waste and more flow* in the same drinker. The plastic in the housing has been changed to be more chemical resistant than ever.

**The NEW Val Regulator Intake**

Now flushing your water lines is even easier. Just twist the handle to REG, FLUSH or OFF. In the REG position, the water can be regulated normally with changes made by the knob underneath. In the FLUSH position, water bypasses the seal and flushes into the water lines. In the OFF position, all water flow stops. The Val Regulator Intake works with our standard diaphragm regulators. An optional solenoid can make flushing the lines automatic. Hook it up to your controller or a thermostat to flush on time or temperature.

**The NEW Universal Saddle**

The Universal Saddle comes with offset supply tube for increased flow and better flushing of lines. It also allows the optional addition of catch cups on either side of the nipple, if needed.

**The IMPROVED Extra High Flow VR205**

The water flow has been increased in the High Pressure Regulator so there is always enough water for the birds, even at 6:30 AM. Experience shows that this new system provides at least 20% more water in a 500 FT length of pipe than the birds will ever need at the peak feed and watering time.
