| <b>Cattle</b><br>Calves (250 to 400 lb): Increased rate of weight gain and improved feed efficiency.<br><br>Growing Cattle (over 400 lb): Increased rate of weight gain, improved feed efficiency, and reduction of liver condemnation due to liver abscesses.<br><br>Beef Cattle: Control of bacterial pneumonia associated with shipping fever complex caused by <i>Pasteurella</i> spp. susceptible to chlortetracycline.<br><br>Beef Cattle (under 700 lb): Control of active infection of anaplasmosis caused by <i>Anaplasma marginale</i> susceptible to chlortetracycline.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 25-70<br>70<br>350<br>360<br>80                                                                                                                                                                                                                                                | <b>Pettigree birds</b><br>Warning: Pettigree, avian chlamydiosis, or ornithosis is a reportable communicable disease, transmissible between wild and domestic birds, other animals and man. Contact appropriate public health and regulatory officials.<br>Caution: Aspergillosis may occur following prolonged treatment.<br>Treatment of pettigree birds (parrots, macaws, cockatoos) suspected or known to be infected with pettigree caused by <i>Chlamydia psittaci</i> sensitive to chlortetracycline. Feed continuously for 45 days. Each bird should consume an amount of medicated feed equal to one-tenth of its body weight daily. During treatment, parrots, macaws, and cockatoos should be kept individually or in pairs in clean cages. |                                                                                                                                                                                                                                                                                                                                         |  |  |  |
| <b>Sheep</b><br>Breeding Sheep: Reduction in the incidence of (ovario-) abortions caused by <i>Campylobacter fetus</i> infection susceptible to chlortetracycline.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                         |  |  |  |

#### Warning

A withdrawal period has not been established for this product in pre-ruminating calves.  
Do not use in calves to be processed for veal.  
Do not feed to ducks or turkeys producing eggs for human consumption.
