

Spray-Vac™ Stabilizer

LIQUID STABILIZER
FOR SPRAY ADMINISTRATION
OF POULTRY VACCINES

ADVANTAGES

- Second generation stabilizer especially engineered for poultry spray vaccines, including fragile bronchitis virus vaccines
- Immediate stabilization of the water
- Rescues vaccines from the harmful effects of chlorine in ordinary tap water or well water
- Eliminates the need for distilled or deionized water as vaccine diluent
- Pink dye to indicate the spray solution is completely safe and ready to receive the vaccine.
- Ideal for use in SoloVac™ or comparable backpack-type sprayers
- Will not clog sprayer nozzles

INDICATIONS

Spray-Vac™ Stabilizer aids in the administration of sprayed vaccines for poultry. It is especially designed to prolong the viability and improve the effectiveness of reconstituted and diluted spray vaccines.

DIRECTIONS FOR USE

Before diluting vaccine in the spray solution, stabilize the water by adding 4 ounces of Spray-Vac™ Stabilizer to each gallon of spray solution when using ordinary tap water or well water containing up to 4 ppm chlorine (Cl).

For unusual circumstances with chlorine levels higher than 4 ppm, see chart below. Uniform distribution of the pink stabilizer in the water assures the stabilizer is thoroughly mixed, and the spray solution is completely safe and ready to receive the vaccine.

Gallons of Water	Ounces of Spray-Vac™ to Use	
	4 ppm Cl	8 ppm Cl
1	4	8
2	8	16
3	12	24
4	16	32
5	20	40
10	40	80
50	200	400

Mix the vaccine into the spray solution and spray according to the manufacturer's directions.

PACKAGING

One Quart (32 oz, or 0.95 Liter) Bottles
12 Quarts per Case

CAUTIONS

For field use only, not for use in hatcheries.
Store at room temperature
Protect from temperature extremes
Not for human use
Keep out of reach of children
