

Improved Feed Efficiency Healthier Animals Lower Mortality Greater Productivity

Egg Producer™ Environmental Control System

MADE IN USA

**The Egg Producer™
is the efficient
way to manage
layer facilities using
computer logic
with site-specific
flexibility...**

**HotKeys™ for
easier setup
menus and
operating
parameters...**

- **Software** tailored to egg layer facilities.
- **Monitors** temperature, humidity, static pressure, feeder runtime and water usage.
- **Provides superior ventilation control** with precise, rapid response to changing conditions.
- **Multiple-zone capability** for optimum temperature and humidity control conditions.
- **Shared Sensor Technology™ (SST)** provides the option of controlling any device with any sensor(s) located throughout the building.
- **PC compatible...**Optional direct or dial-connections.

Why Egg Producer™?

The **Egg Producer™** control system makes it possible to regulate environments with far greater precision and efficiency than any other control.

This is achieved through accurate measurement of temperature, humidity, static pressure, inlet position, feeder runtime and water usage. The **Egg Producer™** keypad and **HotKeys™** make it easy to program your site-specific operating parameters to maintain your optimum environmental conditions.

All **Egg Producer™** controllers include the following features and capabilities:

- Multi-zone capable
- Output channels rated 16 Amps
- User-defined output channels with individual On/Off/Auto manual override switches
- Easy-to-read 2-line backlit display
- Easy setup and operation
- Alarm relay output to signal Auto Dialer, backup units or alarm systems

Expansion modules allow the **Egg Producer™** to be configured or expanded to your specific house requirements.

Egg Producer™	1200 Zone Plus
Standard Output Channels	12
Sensor Inputs	14
Available Station Expansion	12
Multi-Zone Capability	Yes
Fused Output Channels	Yes
Remote Data & Control	Yes
Channel HotKeys™	Yes
Menu HotKeys™	Yes

Additional Systems and Options

Link™ Software

Link™ allows you to remotely access your environmental controller using the Communications Station. This gives you access to system parameters and historical data.

Communications Station

The communications station allows you to remotely access an environmental controller either through a direct connection or a remote dial-up connection (when equipped with the optional **SocketModem™**). The communications station works in conjunction with **Link™** software making it easy to:

- View information such as the current building temperature
- Change control settings
- View equipment status for the entire building
- Create graphs and reports detailing equipment and environmental conditions

Sensors

- Temperature
- Feeder Circuit
- Position Sensor
- Air Temperature
- Static Pressure
- Relative Humidity
- Water Meter
