

Best in Cooling.

The BeaCool Evaporative Cooling System

features a unique stainless steel water dispersal design that delivers maximum water flow for complete pad saturation resulting in the most effective cooling available on the market. Other outstanding features include a hinged top cover for ease of maintenance and pad removal, a seamless trough liner and a large capacity reservoir with dual filtration. When it comes to cooling your flock, Beacon is *Best of All*.

The BeaCool Evaporative Cooling System.

- Stainless steel construction assures years of reliable service and the level of quality you expect from Beacon.
- Water dispersal trough is maintained without the use of tools and without shutting systems down.
- Hinged top cover for easy pad removal and full access to the upper trough & water flow.
- Distribution holes every 1" to put more water on the pads for even and complete saturation.
- Available in flush-mount and 10" off-set frames as required by your house structure.
- Large capacity reservoir to store water off the system, reducing weight load on the house structure.
- Seamless trough liner leaves no gaps or leaks in the lower return trough.
- Dual filtration of recirculated water, consists of two washable stainless steel filters.
- The BeaCool system incorporates heavy duty Küül pads available in 30/30 or 45/15 flute patterns. Also available with edge coating.
- Plumbing package included to maintain the reservoir water level.
- Heavy-duty 1/2 h.p., 90 gallon per minute pump with quick coupler disconnect for winter storage.
- Completely self-contained systems include attachment hardware.

Hinged top cover for easy access to trough and pad.

Stainless pad tray keeps pad out of water.

Completely self-contained systems.

Some things never change...Beacon is still Best of All.
