

BOOT HILL[®]

KILLS RATS & MICE DEAD

a d v a n c e d r o d e n t c o n t r o l t e c h n o l o g y

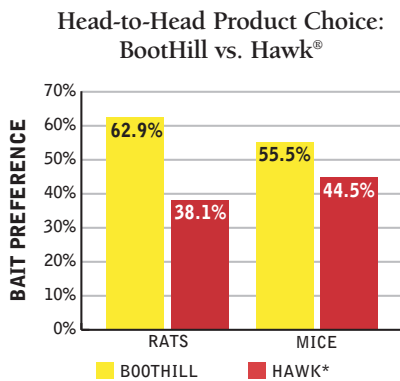

- Which rodenticide tastes the best to rats and mice? *BootHill.*
- Which rodenticide is labeled for burrow baiting? *BootHill.*
- Which single-feed anticoagulant has consistently controlled rats and mice for over 30 years? *BootHill.*

BootHill[®], the first second-generation, single-feed anticoagulant – proven, trusted!

Trusted and used for more than three decades, with label flexibility that allows you to fight the toughest rats and mice under the meanest conditions. Other rotation partners: FastDraw[®] – Gunslinger[®] – Hombre.[™]

- Formulated with the original bromadiolone – Liphatech invented it!
- Convenient baiting options: mini-blocks, 1 lb. blocks or pellets (bulk or place packs).
- Paraffinized pellets for maximum weatherability (labeled for burrow baiting). Provides excellent Norway rat control!
- 1 lb. paraffin blocks for the toughest, wettest weather conditions. Easy to place in confinement production sites.
- Whole food-grade grains for the number-one taste preferred by rats and mice.

- USDA-authorized for rodent control in federal inspection programs.
- Vitamin K₁, same antidote as all other anticoagulants.

Placement flexibility – several BootHill mini-blocks on a wire inside of a T-tube provide a convenient, secure, self-feeding supply of bait for rodents.
