Cid clean

Strong water line cleaner, based on 50% stabilized H_2O_2

- » removes heavy soils
- » equipment friendly
- » completely biodegradable
- » no (heavy) metals

Increase your benefits by protecting your livestock

Removes Heavy Soils

Heavy soil buildup can block the nipples, reduce the pipe volume by 70 to 80% and hence reduce the water flow from the drinking system considerably. The buildup can 'harbor' a lot of soil contaminants which adversely affects the drinking water system. Vaccines and vitamins administered through the water are also negatively affected with buildup in the drinking water system.

Simple high pressure flushing will not remove it. Chlorination neither. Oxygenating the lines will indeed. Cid clean consists of 50% stabilized hydrogen peroxide (H_2O_2) that dissolves into water (H_2O) and Oxygen (O_2). The free gaseous oxygen will "scrub" the nipples and pipes, release and dissolve the heavy soil buildup.

Cid clean application

Cleaning when the system is not in use:

- To clean the system, use a 3% solution (1:33 or 4 ounces per gallon of dilution) and leave to work in the system for 24 hours.
- If applied at 1:128 or 1 ounce per gallon of dilution, leave to work in the system for 48 hours.
- Rinse with plenty of clean water to make sure all product is out of the entire system, including nipples or cups.

Cleaning an operating system (animals present):

- Mix Cid clean at 2 ounces per gallon of water to make a stock solution and set metering pump at 1 ounce stock solution to 1 gallon of water (1:128).
- After every 2 or 3 days, the dosage can be raised 1 ounce of Cid clean per gallon of stock solution until a maximum of 4 ounces per gallon of stock solution is reached.
- Never mix Cid clean in the same stock solution with any other product.
