

≡FASTDRAW® Soft Bait

Why Wait for Rodents to Accept OTHER Baits?

**FastDraw is a highly-palatable, no-wax soft bait.
Its recipe controls any rodent infestation.**

**REVOLUTIONARY NEW
RODENT CONTROL
TECHNOLOGY!**

FastDraw Delivers:

- POWERFUL ATTRACTION
- CONVENIENCE & VERSATILITY
- OUTSTANDING RESULTS

16 lb. pail

8 lb. pail

0.35oz. pouch
(60% of actual size)

LIPHA[®]TECH

≡FASTDRAW®

FastDraw takes 4-5 days to work.

≡Fast Acceptance for Outstanding Results

Rodent infestations are a real biosecurity threat!

Rats and mice are vectors for Salmonella, toxoplasmosis, and other diseases.

Hard-hitting FastDraw offers unique advantages over conventional baits:

Powerful Attractants

FastDraw's unique formula gets infestations quickly under control.

Convenient & Versatile

Perfect solution for challenging placements above cleanout pits and subfloors.

Outstanding Results

Combines the bait integrity of mini-blocks with the money-saving, targeted dosing of place-packs.

- Contains food-grade grains and oils, and no wax for maximum attraction – even with competing grains nearby.
- Aroma escapes through the breathable pouch to attract or “draw” rodents and encourage feeding.
- 10g (0.35 oz.) bait pouch permits flexible, low cost placements.
- Unique, easy-to-secure bait pouch can be quickly and securely fixed on nails, on wire between floor slats, in tough-to-access wall voids, or on rods in bait stations.
- Maintains its palatability and integrity (shape) in extreme hot and cold environments.
- Contains the active ingredient difethialone – works in a single feeding for faster results.

FASTDRAW®

Fast Acceptance for Outstanding Results

Another innovative first in rodenticide technology from Liphatech

LIPHATECH

19001-2 (10/17/11)

Draw a following of rodents with FastDraw.

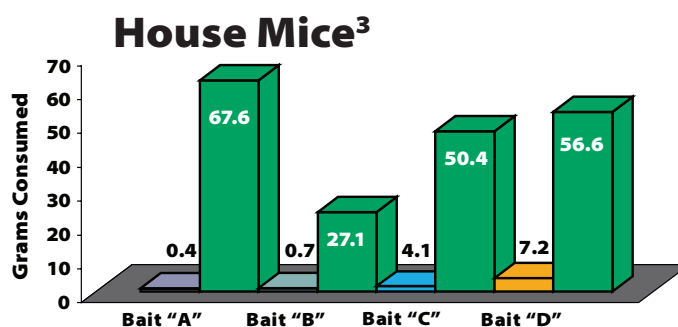

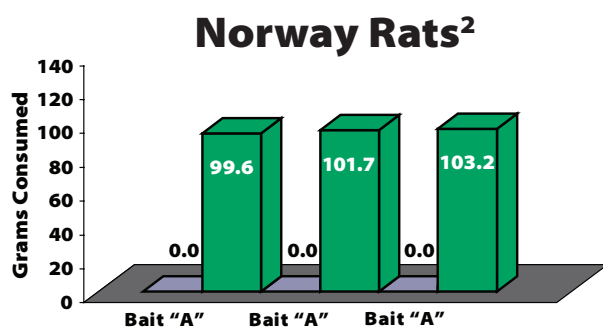

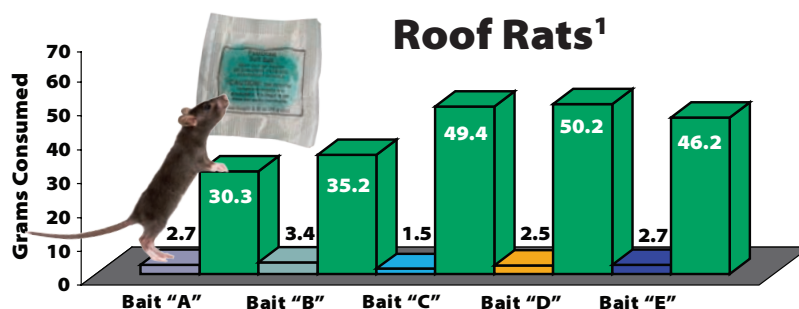

Rodents damage buildings, curtains, wiring and watering systems.

One rat can consume over 20 lbs. of feed in a year, and contaminate much more.

And there is rarely only one rat!

But there is a farm-tested solution, that will work,

- even where other conventional baits fail, and
- even with competing foodstuffs nearby...

¹Hog farm; overnight test; FastDraw Soft Bait was compared head-to-head against 5 leading baits; competing food was also available.

²Dairy Barn; averaged over 3 tests; FastDraw Soft Bait was compared head-to-head against a leading brand in three bait stations; competing food was also available.

³Dairy Barn; averaged over 3 tests; FastDraw Soft Bait was compared head-to-head against 4 leading baits; competing food was also available.

Biosecurity Rodenticide Rotation

FASDRAW®

4 MONTHS

MONTH 1

MONTH 2

MONTH 3

MONTH 4

MONTH 5

GUNSLINGER®

CLEAN OUT

Acute toxicant -
different mode of action
(breaks the anti-coagulant cycle)
fits perfectly in any
bait rotation program.

MONTH 12

40% more control for less money
than most 1 oz. mini-blocks
(which only control approx.
38 mice each).

MONTH 11

More placements per container:
one 3/4 oz. mini-block
controls up to 53 mice.

MONTH 10

Stops the toughest
salmonella-carrying rodents.

MONTH 9

Contains the newest, single-feed
anticoagulant, Difethialone.
Preferred by mice & roof rats.

MONTH 8

Bulk Pellets - best option for
treating Norway rat burrows.

MONTH 7

LD₅₀: Dog -
(lethal dose in 50%
of 22 pound dogs)
is 78.6 mini-blocks.

MONTH 6

Superior
bait acceptance / palatability -
made with peanut meal.
Preferred by Norway rats.

BOOTHILL®
KILLS RATS
& MICE DEAD
