

Configure, monitor, and optimize your sorting system

Select Sort, along with a personal computer and Pro-Sort Scale Heads, make up the most advanced auto-sort and livestock management system available.

The Auto-sort Management System is designed to enhance profits by providing tools for maximizing scale use, optimizing food court space and feeding programs, and precisely marketing animals. At the same time, the user-friendly design significantly reduces labor input.

Select Sort allows you to monitor and configure your scale heads from a central computer. With optional remote access, you can monitor multiple sites from virtually anywhere in the world.

Information at a glance—monitor your targets

Select Sort's information at a glance allows you to easily locate the information you need to know.

Within seconds, you can easily find:

- ◆ Minimum, maximum, average, and median weights
- ◆ Average daily gain—a great indicator of how the herd is performing
- ◆ Weight distribution, standard deviation, and coefficient of variance
- ◆ Hits (weight readings) per animal
- ◆ Weight group and sort direction summaries

Features and advantages

- ◆ **Auto-sort mode** automatically sorts according to weight group settings.
- ◆ **H.U.I. mode** helps optimize food court space by using programmable two or three-way splitting percentages to keep food courts from being overcrowded or underused. Select Sort can calculate set points based on up to the previous five days of data.
- ◆ **Sort-curve mode** uses industry-leading growth curves to optimize food courts and feeding strategies. Select a predefined curve or adapt one to your herd growth model and management style. Sort curves allow you to easily determine how far you are from your target performance.
- ◆ **Color detection and sorting** sorts painted animals according to special settings.
- ◆ **Market sorting** sorts painted and/or weight-range animals according to special settings.
- ◆ **Training mode** for training new animals to use the sorter
- ◆ **Emergency mode** allows limited, basic settings directly at the scale head in case of computer problems.
- ◆ **Market Forecaster** estimates when and how many animals will be ready to ship over the selected date range.
- ◆ **Interactive, easy-to-use displays** make it easy to configure, monitor, and optimize your system.
- ◆ **Automatic data collection** automatically collects and stores weight and sorting information.
- ◆ **Manual Control Viewer** allows users to quickly interact with and manually operate any scale head, and is ideal for testing installation and equipment.
- ◆ **Sort Summary Viewer** displays information about all sorters and their current market status.
- ◆ **No activity alarm, stuck animal alarm, and pen capacity warnings** inform you about problems and potential overcrowding in pens.
- ◆ **Twelve informative, customizable charts and reports** are available in printable, portable, and exportable formats.
- ◆ **EID/RFID** option allows you to track movement of each individual animal.
