

Precision

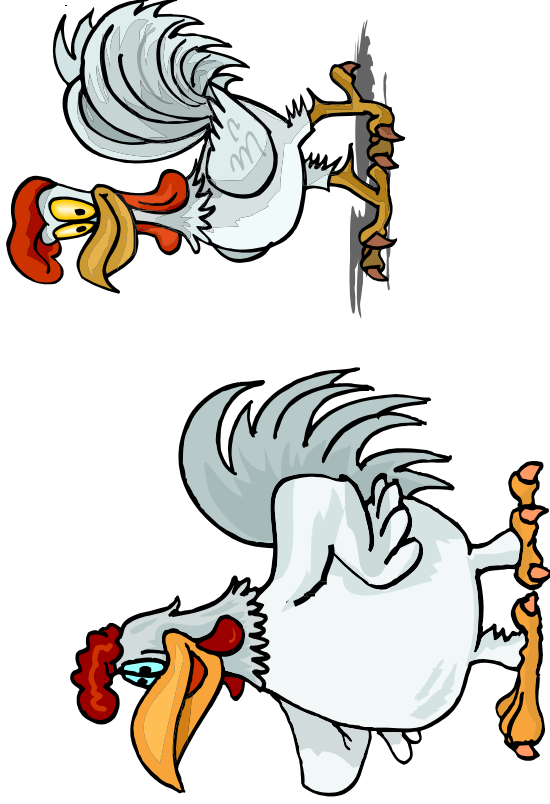

Bird Weighing System

Monitoring Bird Health and Performance

Precision

Monitors Bird Performance

- Is today 's actual bird weight matching the target weight.
- What is the weight uniformity of the birds?
- Are adjustments to temperature, water or feed intake necessary to maintain target weights?

Precision

Monitors Bird Health

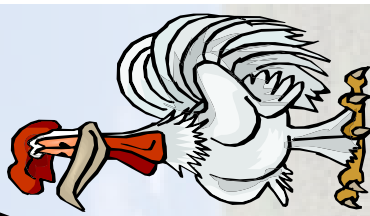

- **Birds go off feed, then water, when challenged by a disease. This drop in daily gain is immediately displayed alerting you of a potential problem up to 48 hours earlier than normal.**

Precision

Accurate Bird Weighing can....

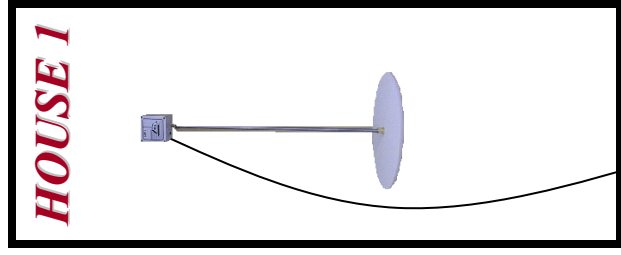

- **Reduce medication costs**
- **Reduce mortality**
- **Prevent interruptions in daily growth rates**

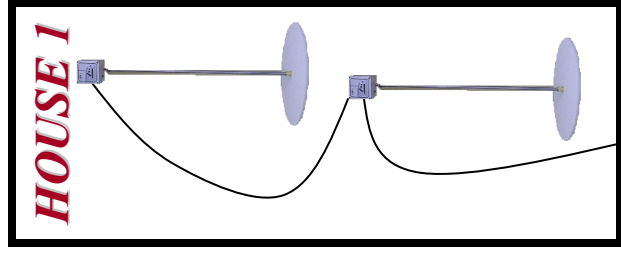

Precision

simple, low cost wiring between controls and platforms. The simplest in the Industry

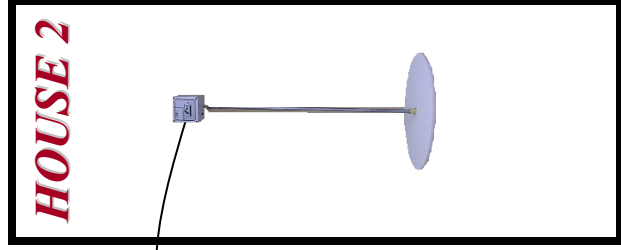

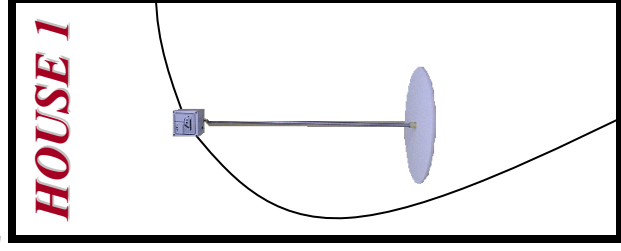

OPTION 1

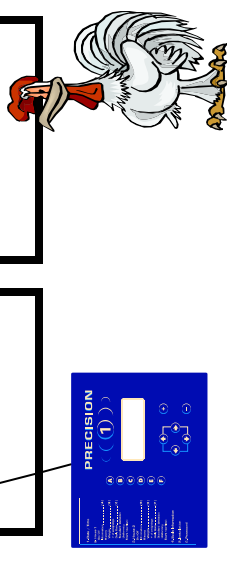

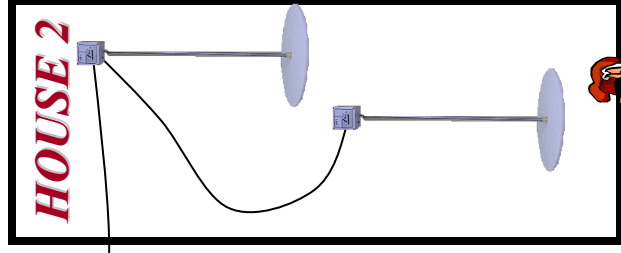

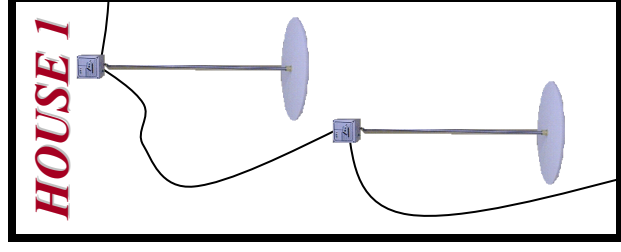

OPTION 2

OPTION 3

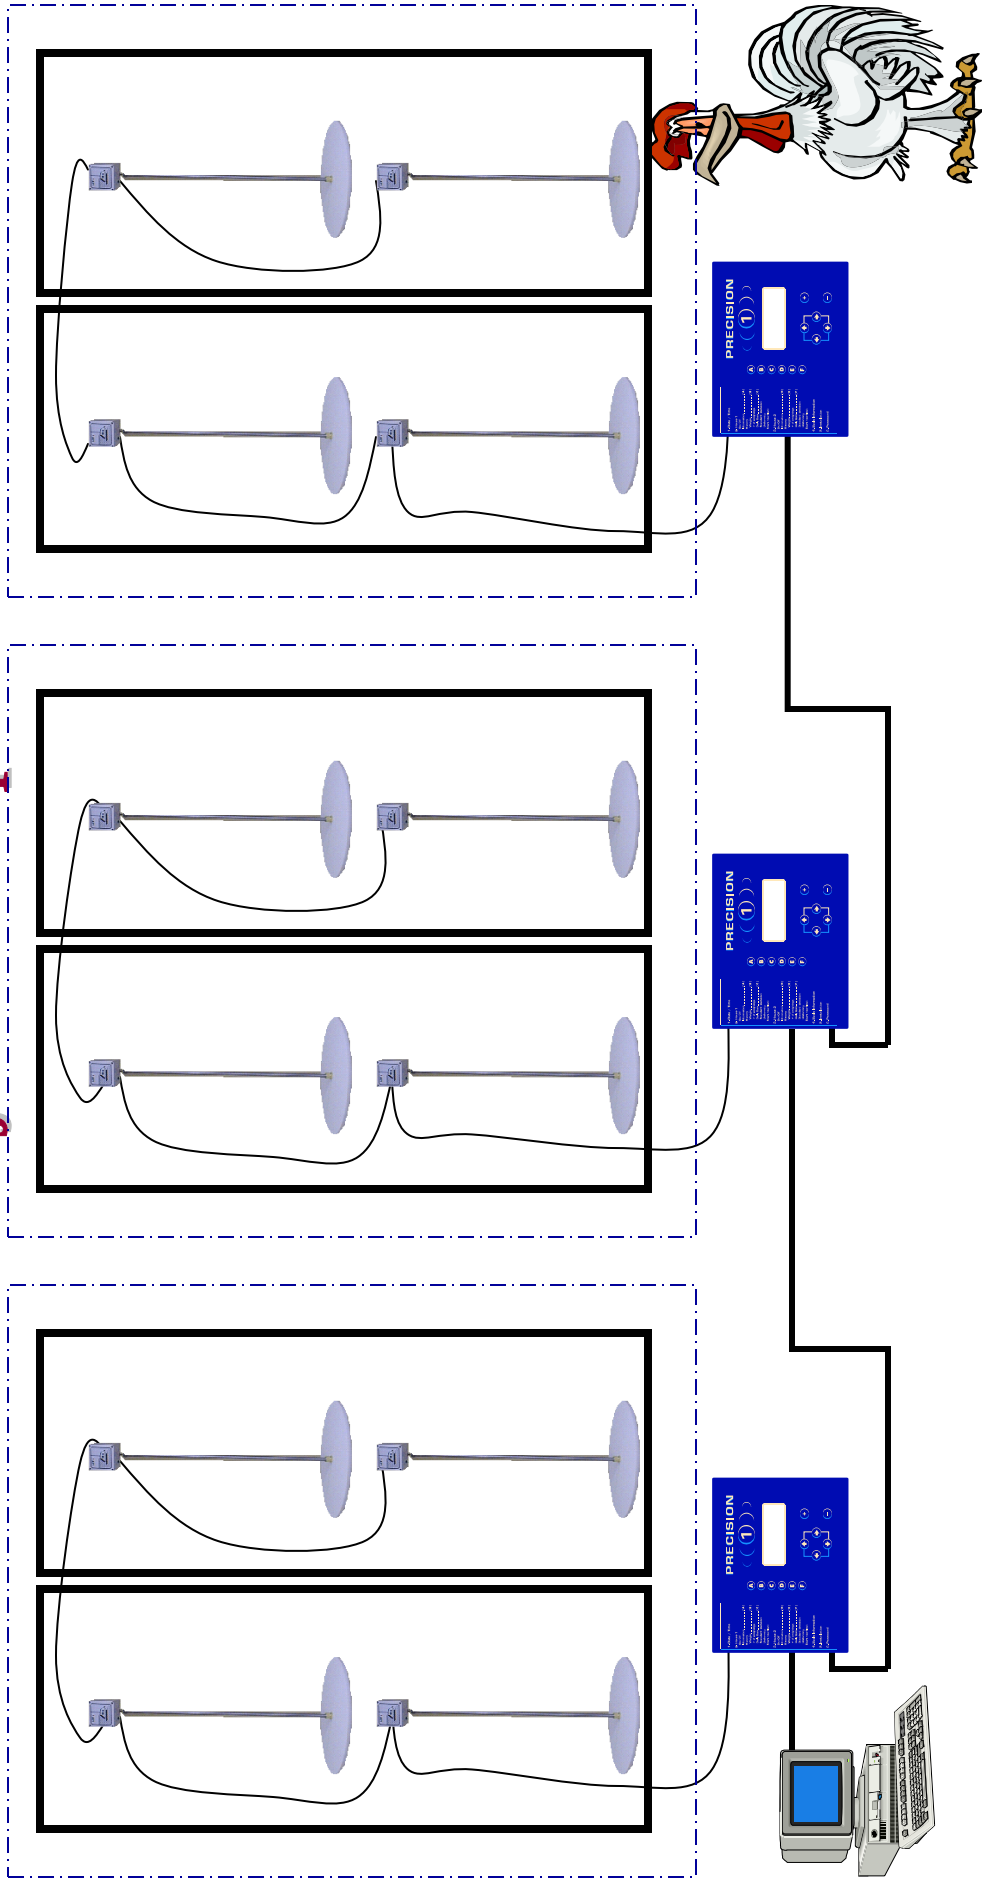

OPTION 4

Precision

Easy to connect all houses and floors together in serial communication with just Two pairs of twisted wire

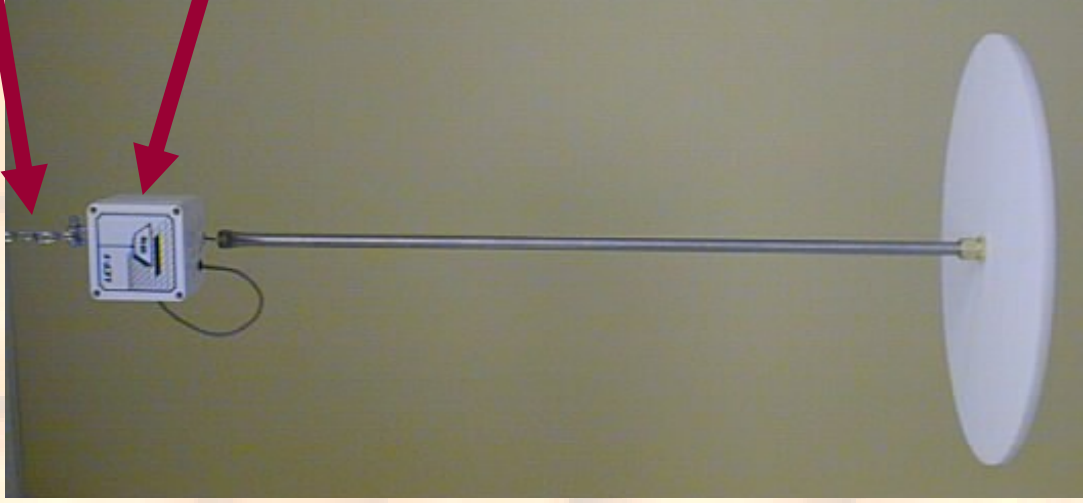

Precision Platform

Chain Suspension makes it easy to adjust height of Platform.

50 Kg Trade Quality Load Cell is located above the Platform away from the Litter. All Electronics are sealed.

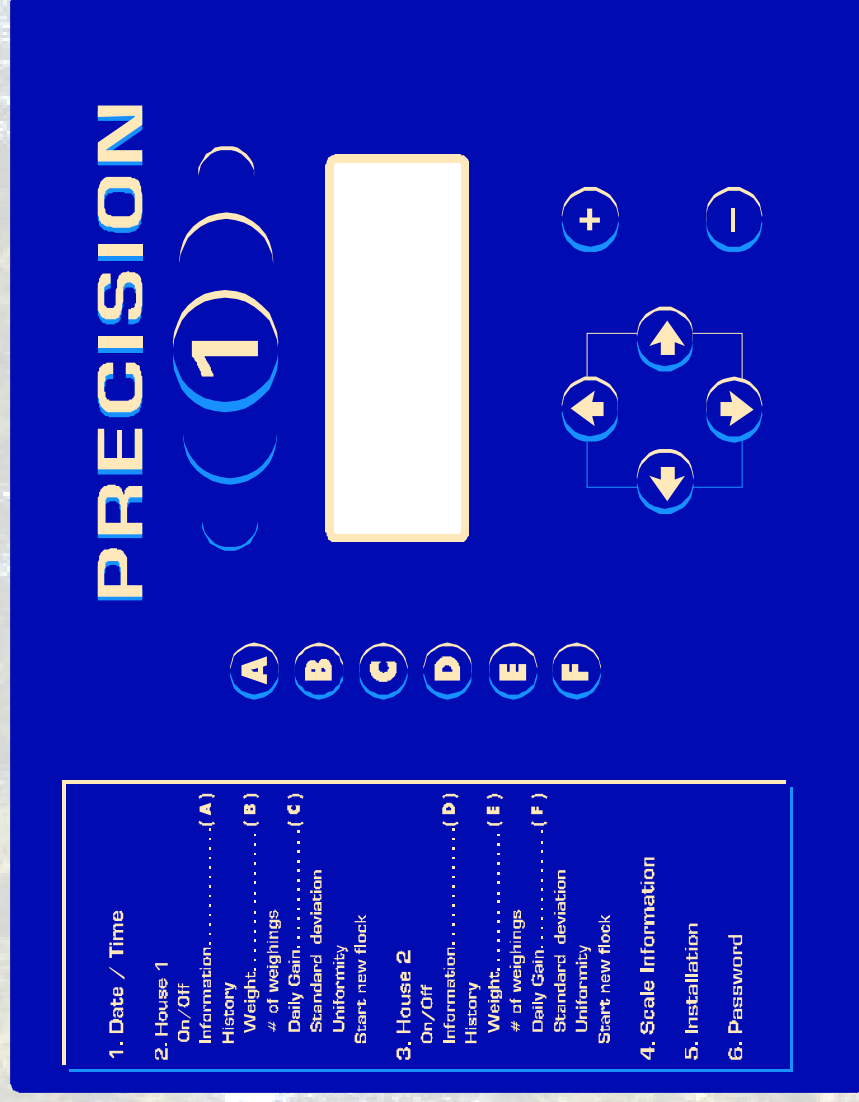

No electrical wires under the Platform.

**Weighing Platform is off the litter.
Easy to remove during barn cleaning**

Precision

Controller

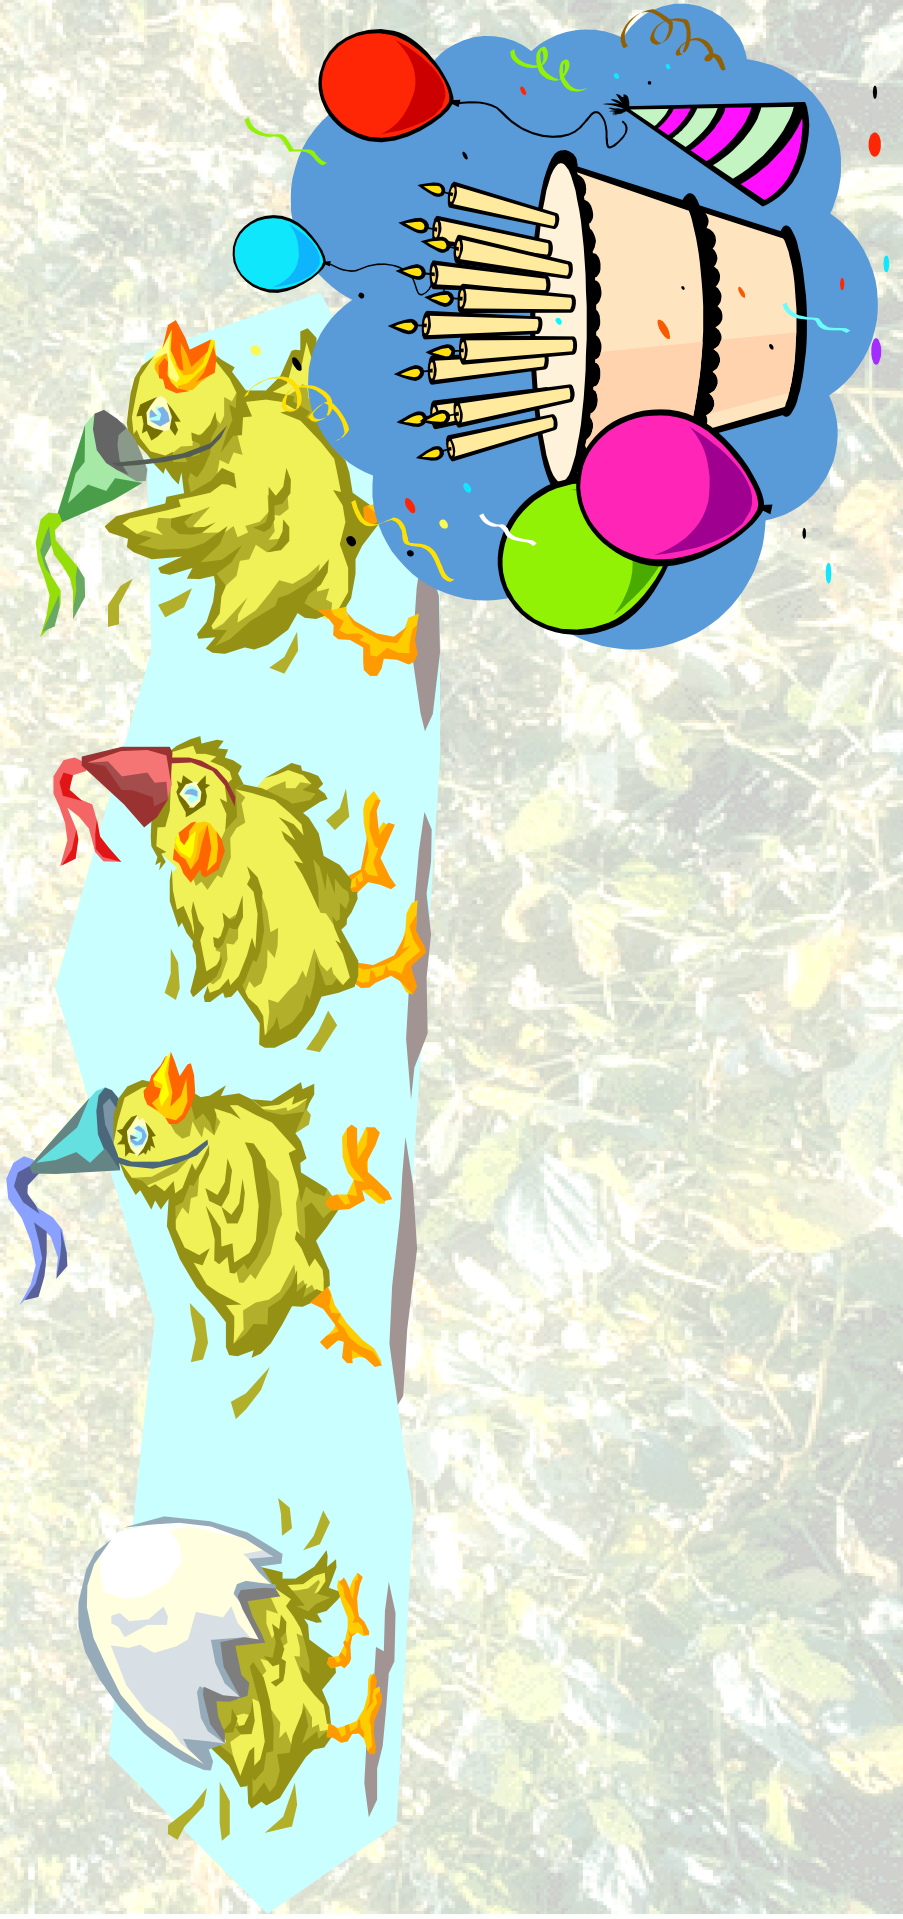

Easy to read display. Simple to program.

Simple to operate.

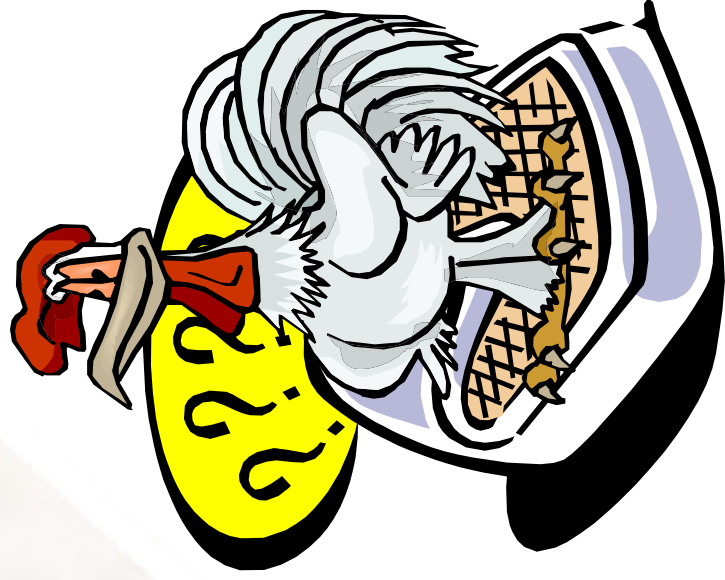

Precision shows.....Age of Birds

Precision shows....

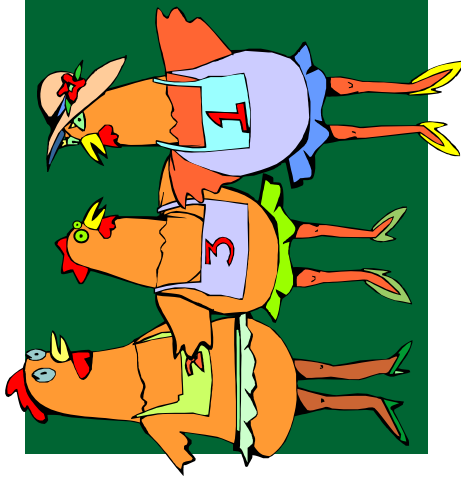

.....Average weight of birds

Precision

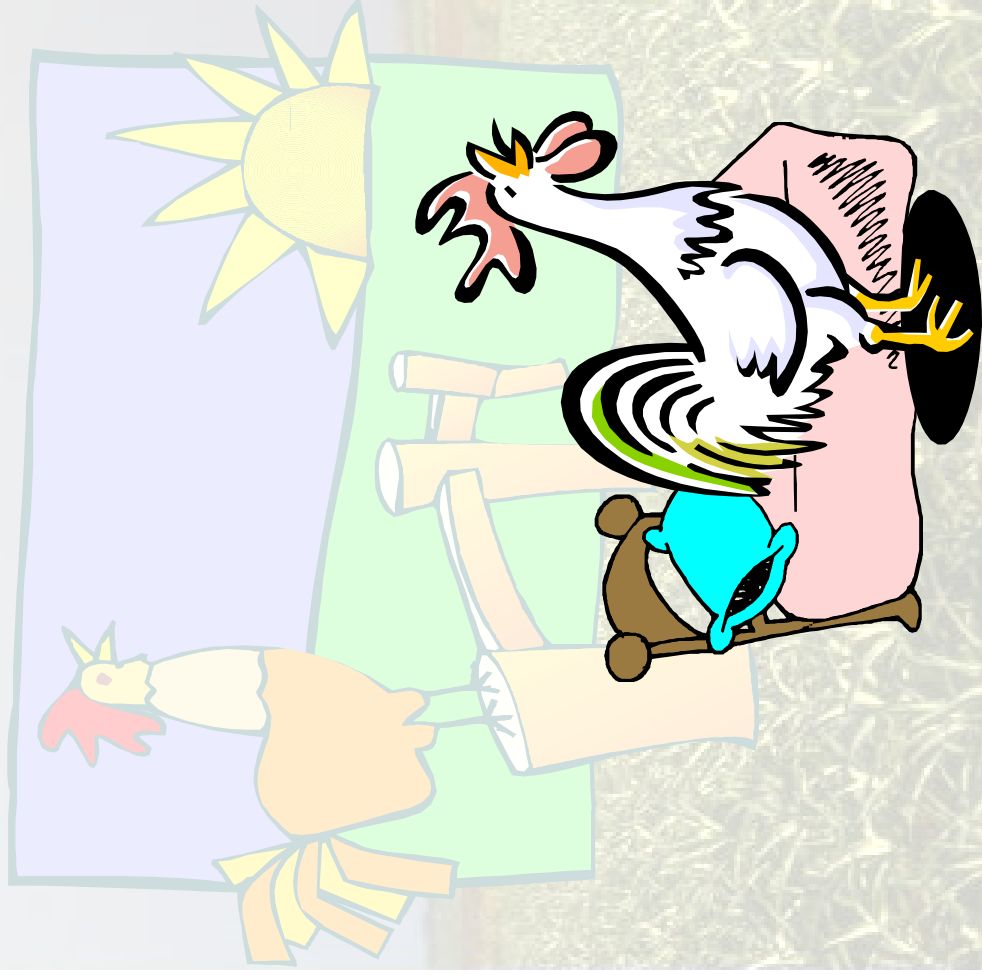

shows....

....The number of bird weighings today

Precision shows....

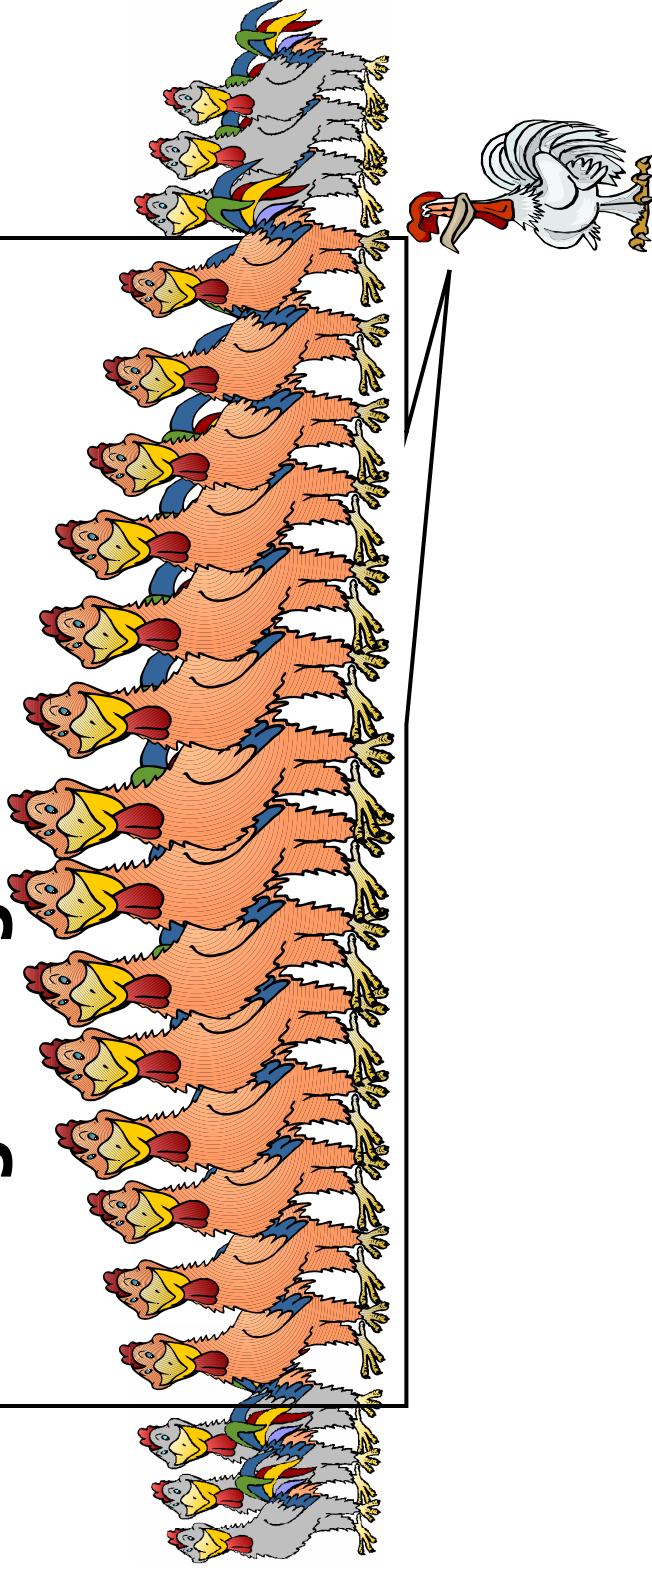

....Today's weight gain

Precision shows....

....Today's standard weight
deviation

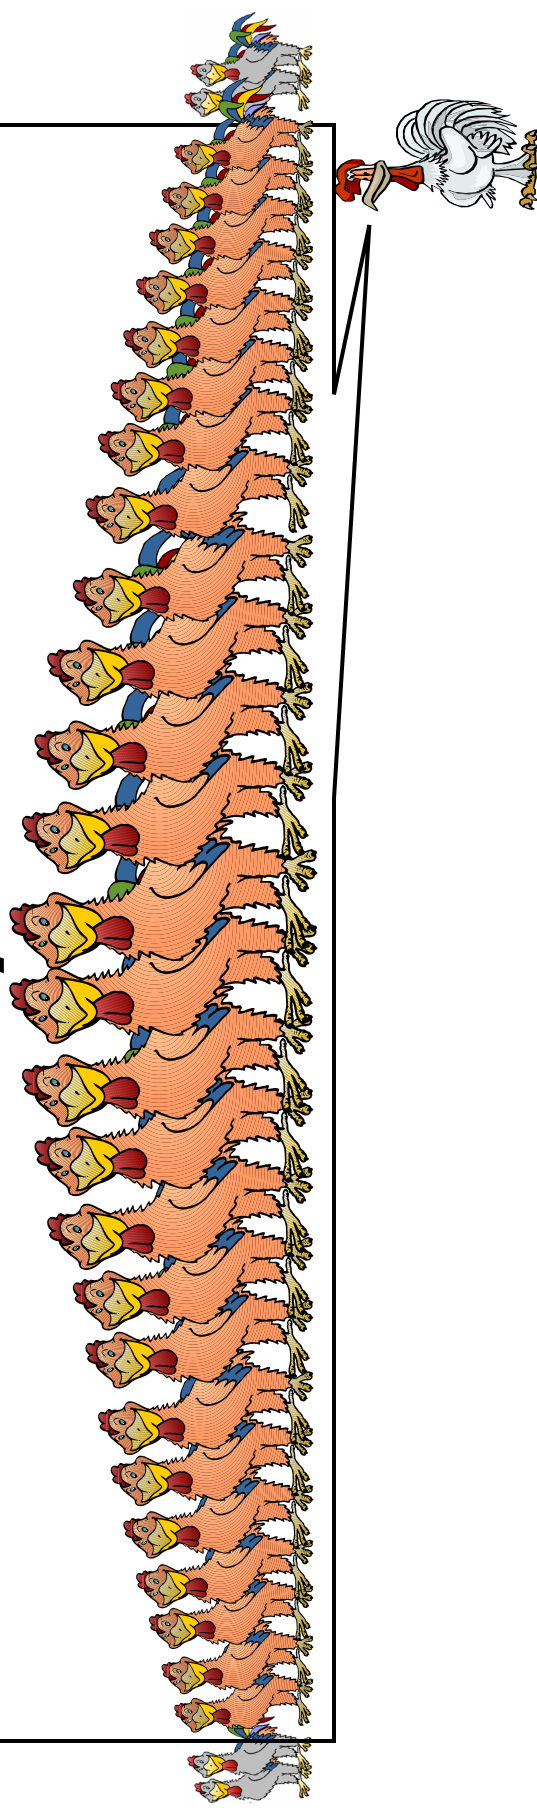

**Example: 68% of flock is
within 100 grams of the
average weight of all the birds.**

Precision shows....

What % of birds are between the average weight and the selected uniformity bandwidth?

Example: 89% of the bird weights are within the selected uniformity bandwidth.

Precision

shows....

... Individual data per scale and per house

HOUSE 1

HOUSE DATA

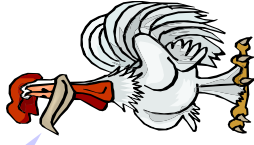

- Age of birds
- Average weight of birds
- Number of weighing
- Today's weight gain
- Today standard deviation
- Uniformity bandwith

Scale 1 DATA

- Actual weight
- Average weight
- Number of weighings
- Last weighing

Scale 2 DATA

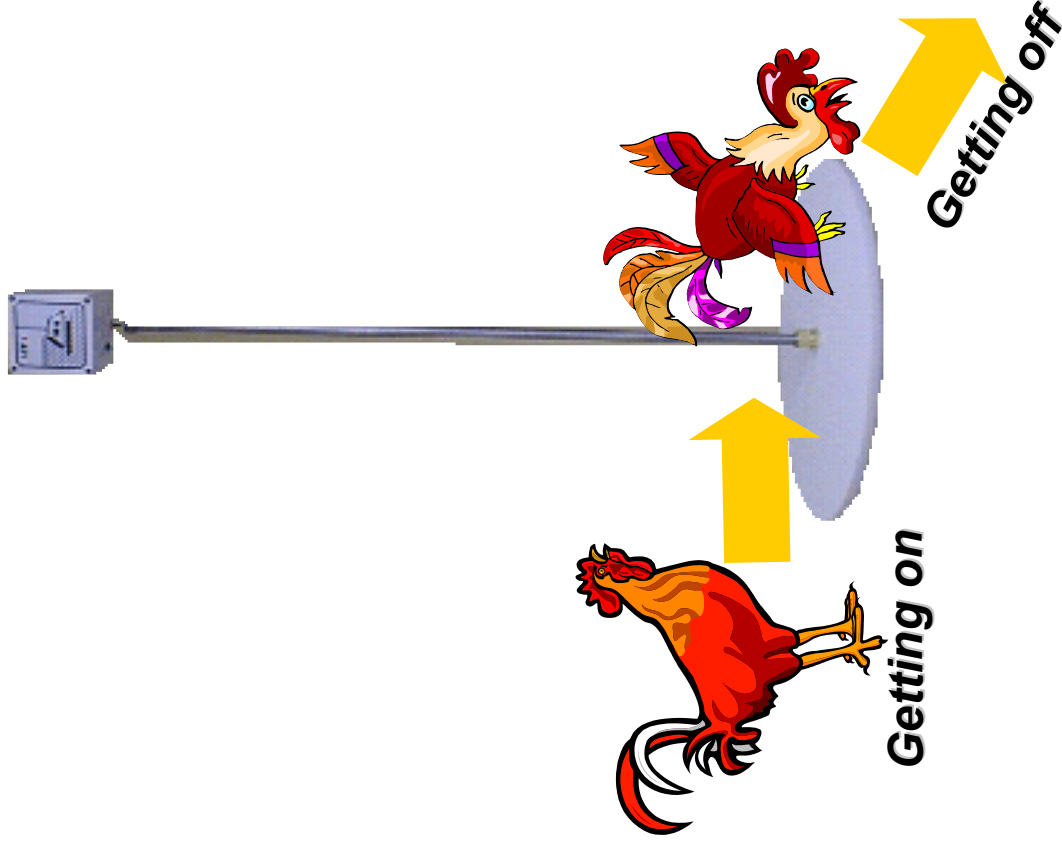

- Actual weight
- Average weight
- Number of weighings
- Last weighing

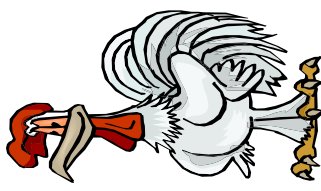

Precision

shows....

....How many actual weighings today

*Birds are
weighed both
when getting
on and off the
platform.*

Precision shows....

....Complete Flock History

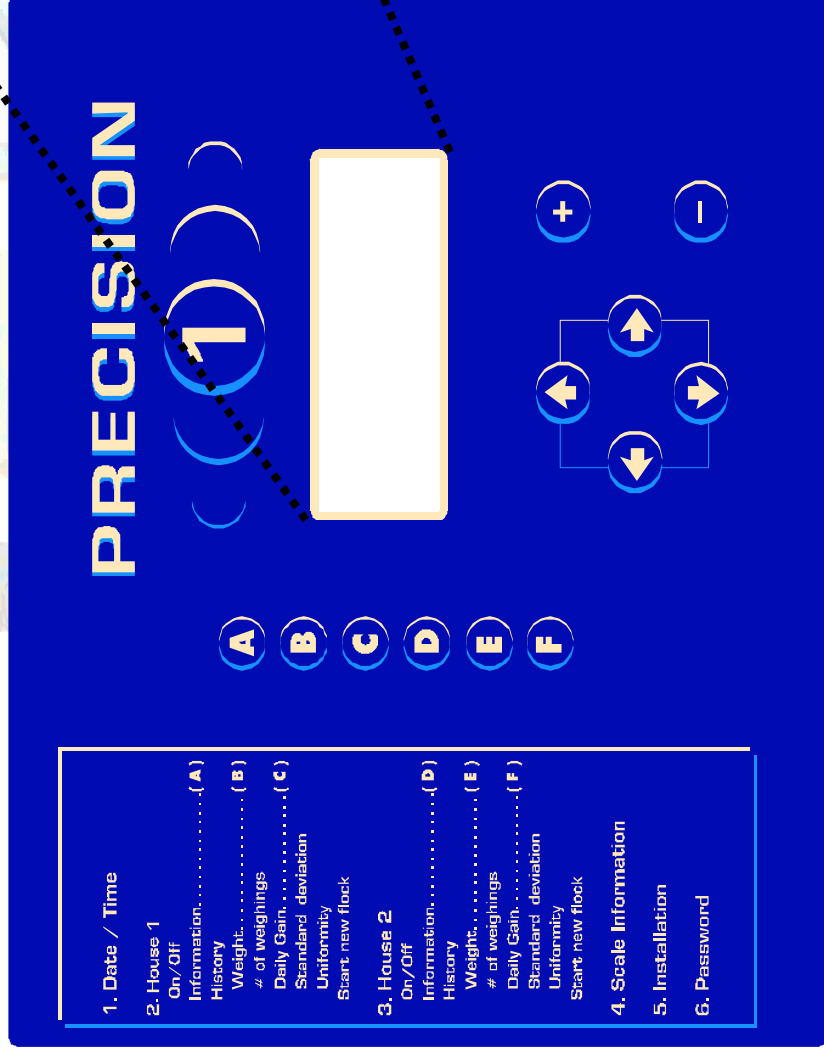

Information shown for each day is also shown since the beginning of the flock (45DAYS)

Read Information directly from the Precision Control

House 1 Info
Age: 1day
Avg weight: 47g
Weighings: 935

Read Precision Information on your PC with Ag-Net software

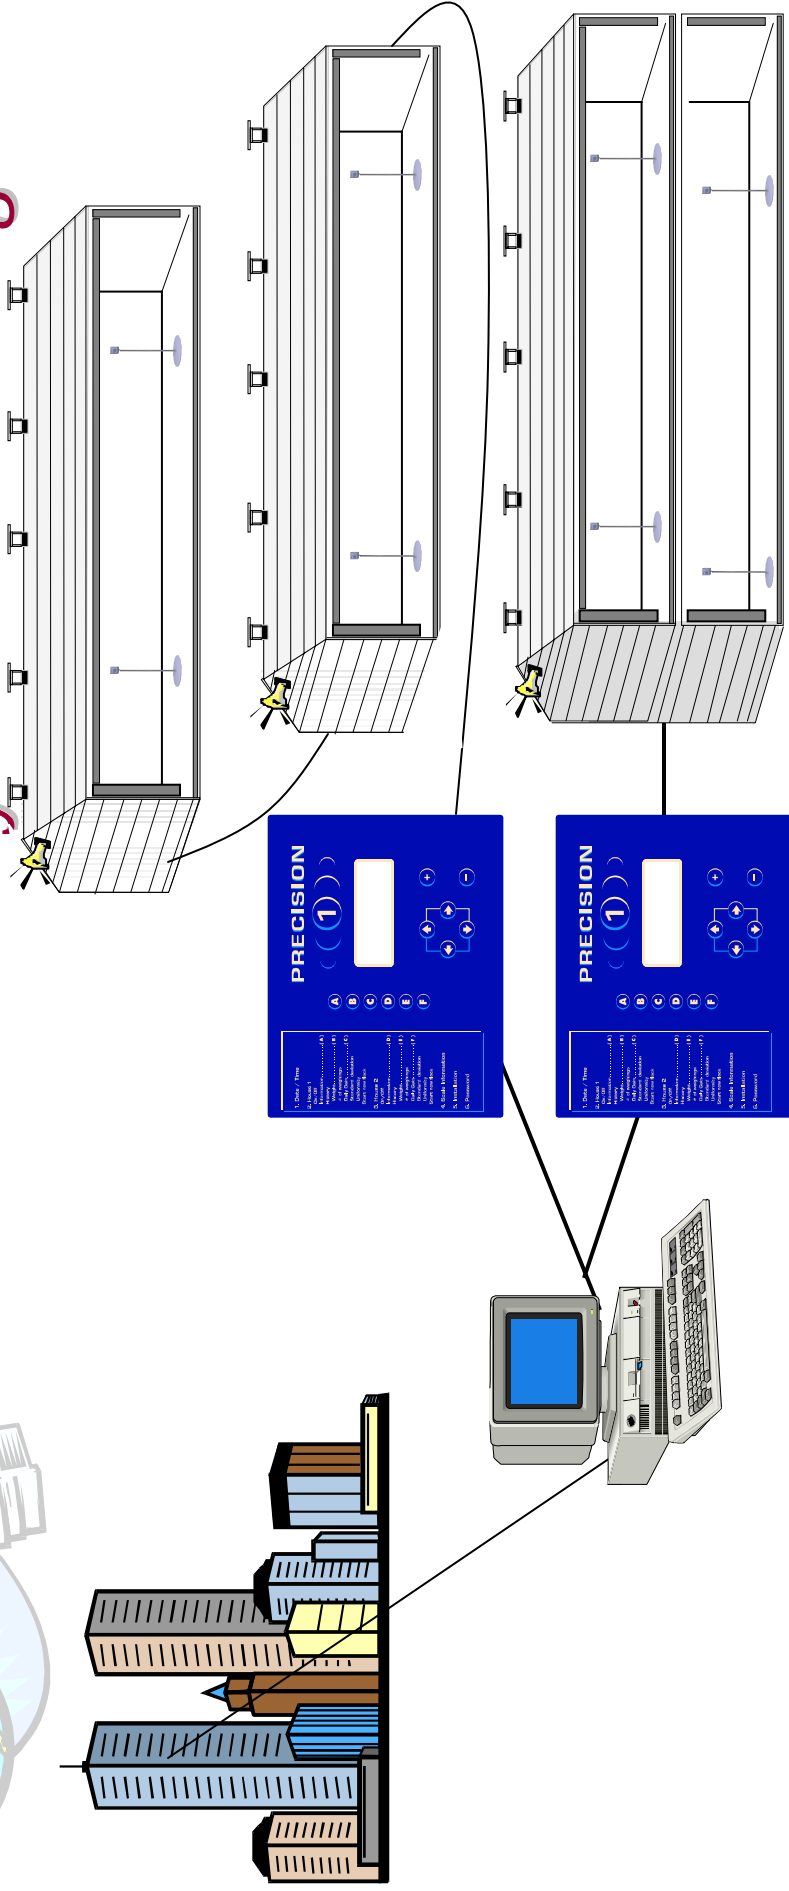

temperature
weight
feed intake

**Show bird weight information by itself or in
relationship with temperature, water and feed intake.**

Precision

Ag-Net software allows Processor to Access your Precision scales to monitor your Flocks Weight

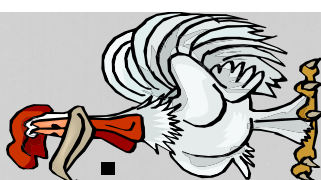

Processor has direct access to bird weights on every farm. Ensures that the Processor gets the exact birds he needs for that days production.

No compromises with Precision

Bird Weighing Systems

- **In providing all pertinent bird weight information in a simple, concise format.**
- **In installation simplicity.**
- **In programming simplicity.**
- **In Load Cell and Electronics reliability.**
- **In after sale service.**
