Note: As an Authorized Ziggity Distributor we have a defined product offering & sales territory and may have to refer you another distributor if we're unable to provide you Ziggity products.

Floor-watering system “EasyLine” for Turkey rearing and finishing

The central element of the floorwatering system is the Turkey-Nipple Art. 4070. The combination of the pendulum and the different stainless steel reinforced Drip cups ensures a dry manure and best results for the rearing and fattening for every age of the turkey.

The principle of the pendulum

The pendulum gets directed with the head of the animal at every absorption of water. In the open version of the pendulum (25 mm starter ball) the water flows from the 28 mm square pipe down the inside of the pendulum into the cup (image above). In the closed version (30 mm starter ball) the water flows down the outside of the pendulum into the cup (image below). The rim of the cup is cleaned by the wattles and neck feathers of the birds at every drinking session. Therefore the optimal height for the animals is necessary.

EasyLine

The Recipe for Success is Easy.
Just Add Water.
